

HYDERABAD, 14th December, 2018 - **MENLOPARK TECHNOLOGIES PRIVATE LIMITED**

is proud to announce its collaboration with **PERCEPIO**.

**MENLOPARK TECHNOLOGIES** have formed a strategic partnership with **PERCEPIO**, by taking up the distribution rights of products and services of **PERCEPIO** in INDIA.

#### **ABOUT PERCEPIO:**

**Percepio** supports Tracealyzer, which is the premier trace visualization tool for developers of RTOS- or Linux-based embedded software systems, armKEIL, ThreadX RTOS.

Tracealyzer can be used side-by-side with traditional debuggers, such as IAR, Keil or Eclipse tools, and complements the detailed debugger view with several additional views on system level, ideal for understanding real-time issues where a classic debugger is not sufficient.

The trace can be **streamed in real-time**, either using a supported debug probe or by using a custom target-host interface, such as a USB or TCP/IP. So far, this is supported for FreeRTOS, Micrium and SafeRTOS, but additional streaming support is planned.

Tracealyzer is one sophisticated tracing tool to get better insight into the run-time world of your system and accelerate your development, debugging and validation and optimization.

#### **ABOUT MENLOPARK:**

Menlopark Technologies was born at the nexus of two powerful trends; Embedded Systems, and Automotive Electronics evolution. After launching our Embedded Engineering Solutions in 1994 as a part of the Embedded Software Development Systems Private Limited family we saw the opportunity, or more precisely the need, to provide highly integrated software and hardware solutions that accelerate time to market.

Our one-stop service for embedded systems development encompasses not only RTOS, compilers and debuggers, but also various other services, such as design automation, software test automation, AUTOSAR and in-vehicle infotainment systems.

The strategic partnership with **PERCEPIO** is to serve the customers and clients across the country and to continuously deliver better services and support in debugging and validation.
